1 Comparison with IAS 40, Investment Property
Indian Accounting Standards

Indian Accounting Standard (Ind AS) 40

Investment Property

(This Indian Accounting Standard includes paragraphs set in bold type and plain type, which have equal authority. Paragraphs in bold type indicate the main principles.)

Objective

1 The objective of this Standard is to prescribe the accounting treatment for investment property and related disclosure requirements.

Scope

2 This Standard shall be applied in the recognition, measurement and disclosure of investment property.

3 Among other things, this Standard applies to the measurement in a lessee’s financial statements of investment property interests held under a lease accounted for as a finance lease and to the measurement in a lessor’s financial statements of investment property provided to a lessee under an operating lease. This Standard does not deal with matters covered in Ind AS 17 Leases, including:

(a) classification of leases as finance leases or operating leases;

(b) recognition of lease income from investment property (see also Ind AS 18 Revenue);

(c) measurement in a lessee’s financial statements of property interests held under a lease accounted for as an operating lease;
Investment Property

(d) measurement in a lessor’s financial statements of its net investment in a finance lease;

(e) accounting for sale and leaseback transactions; and

(f) disclosure about finance leases and operating leases.

4 This Standard does not apply to:

(a) biological assets related to agricultural activity (see Ind AS 41 Agriculture\(^1\)); and

(b) mineral rights and mineral reserves such as oil, natural gas and similar non-regenerative resources.

Definitions

5 The following terms are used in this Standard with the meanings specified:

*Carrying amount* is the amount at which an asset is recognised in the balance sheet.

*Cost* is the amount of cash or cash equivalents paid or the fair value of other consideration given to acquire an asset at the time of its acquisition or construction or, where applicable, the amount attributed to that asset when initially recognised in accordance with the specific requirements of other Indian Accounting Standards, eg Ind AS 102 Share-based Payment.

*Fair value* is the amount for which an asset could be exchanged between knowledgeable, willing parties in an arm’s length transaction.

*Investment property* is property (land or a building—or part of a building—or both) held (by the owner or by the lessee under a finance lease) to earn rentals or for capital appreciation or both, rather than for:

---

\(^1\) Ind AS 41 Agriculture is under formulation.
Indian Accounting Standards

(a) use in the production or supply of goods or services or for administrative purposes; or

(b) sale in the ordinary course of business.

Owner-occupied property is property held (by the owner or by the lessee under a finance lease) for use in the production or supply of goods or services or for administrative purposes.

6 [Refer to Appendix 1]

7 Investment property is held to earn rentals or for capital appreciation or both. Therefore, an investment property generates cash flows largely independently of the other assets held by an entity. This distinguishes investment property from owner-occupied property. The production or supply of goods or services (or the use of property for administrative purposes) generates cash flows that are attributable not only to property, but also to other assets used in the production or supply process. Ind AS 16 Property, Plant and Equipment applies to owner-occupied property.

8 The following are examples of investment property:

(a) land held for long-term capital appreciation rather than for short-term sale in the ordinary course of business.

(b) land held for a currently undetermined future use. (If an entity has not determined that it will use the land as owner-occupied property or for short-term sale in the ordinary course of business, the land is regarded as held for capital appreciation.)

(c) a building owned by the entity (or held by the entity under a finance lease) and leased out under one or more operating leases.

(d) a building that is vacant but is held to be leased out under one or more operating leases.

(e) property that is being constructed or developed for future use as investment property.
The following are examples of items that are not investment property and are therefore outside the scope of this Standard:

(a) property intended for sale in the ordinary course of business or in the process of construction or development for such sale (see Ind AS 2 Inventories), for example, property acquired exclusively with a view to subsequent disposal in the near future or for development and resale.

(b) property being constructed or developed on behalf of third parties (see Ind AS 11 Construction Contracts).

(c) owner-occupied property (see Ind AS 16), including (among other things) property held for future use as owner-occupied property, property held for future development and subsequent use as owner-occupied property, property occupied by employees (whether or not the employees pay rent at market rates) and owner-occupied property awaiting disposal.

(d) [Refer to Appendix 1]

(e) property that is leased to another entity under a finance lease.

Some properties comprise a portion that is held to earn rentals or for capital appreciation and another portion that is held for use in the production or supply of goods or services or for administrative purposes. If these portions could be sold separately (or leased out separately under a finance lease), an entity accounts for the portions separately. If the portions could not be sold separately, the property is investment property only if an insignificant portion is held for use in the production or supply of goods or services or for administrative purposes.

In some cases, an entity provides ancillary services to the occupants of a property it holds. An entity treats such a property as investment property if the services are insignificant to the arrangement as a whole. An example is when the owner of an office building provides security and maintenance services to the lessees who occupy the building.
12 In other cases, the services provided are significant. For example, if an entity owns and manages a hotel, services provided to guests are significant to the arrangement as a whole. Therefore, an owner-managed hotel is owner-occupied property, rather than investment property.

13 It may be difficult to determine whether ancillary services are so significant that a property does not qualify as investment property. For example, the owner of a hotel sometimes transfers some responsibilities to third parties under a management contract. The terms of such contracts vary widely. At one end of the spectrum, the owner’s position may, in substance, be that of a passive investor. At the other end of the spectrum, the owner may simply have outsourced day-to-day functions while retaining significant exposure to variation in the cash flows generated by the operations of the hotel.

14 Judgement is needed to determine whether a property qualifies as investment property. An entity develops criteria so that it can exercise that judgement consistently in accordance with the definition of investment property and with the related guidance in paragraphs 7–13. Paragraph 75(c) requires an entity to disclose these criteria when classification is difficult.

15 In some cases, an entity owns property that is leased to, and occupied by, its parent or another subsidiary. The property does not qualify as investment property in the consolidated financial statements, because the property is owner-occupied from the perspective of the group. However, from the perspective of the entity that owns it, the property is investment property if it meets the definition in paragraph 5. Therefore, the lessor treats the property as investment property in its individual financial statements.

**Recognition**

16 **Investment property shall be recognised as an asset when, and only when:**

(a) it is probable that the future economic benefits that are associated with the investment property will flow to the entity; and
Investment Property

(b) the cost of the investment property can be measured reliably.

17 An entity evaluates under this recognition principle all its investment property costs at the time they are incurred. These costs include costs incurred initially to acquire an investment property and costs incurred subsequently to add to, replace part of, or service a property.

18 Under the recognition principle in paragraph 16, an entity does not recognise in the carrying amount of an investment property the costs of the day-to-day servicing of such a property. Rather, these costs are recognised in profit or loss as incurred. Costs of day-to-day servicing are primarily the cost of labour and consumables, and may include the cost of minor parts. The purpose of these expenditures is often described as for the ‘repairs and maintenance’ of the property.

19 Parts of investment properties may have been acquired through replacement. For example, the interior walls may be replacements of original walls. Under the recognition principle, an entity recognises in the carrying amount of an investment property the cost of replacing part of an existing investment property at the time that cost is incurred if the recognition criteria are met. The carrying amount of those parts that are replaced is derecognised in accordance with the derecognition provisions of this Standard.

Measurement at recognition

20 An investment property shall be measured initially at its cost. Transaction costs shall be included in the initial measurement.

21 The cost of a purchased investment property comprises its purchase price and any directly attributable expenditure. Directly attributable expenditure includes, for example, professional fees for legal services, property transfer taxes and other transaction costs.

22 [Refer to Appendix 1]
23 The cost of an investment property is not increased by:

(a) start-up costs (unless they are necessary to bring the property to the condition necessary for it to be capable of operating in the manner intended by management),

(b) operating losses incurred before the investment property achieves the planned level of occupancy, or

(c) abnormal amounts of wasted material, labour or other resources incurred in constructing or developing the property.

24 If payment for an investment property is deferred, its cost is the cash price equivalent. The difference between this amount and the total payments is recognised as interest expense over the period of credit.

25 The initial cost of a property interest held under a lease and classified as an investment property shall be as prescribed for a finance lease by paragraph 20 of Ind AS 17, i.e. the asset shall be recognised at the lower of the fair value of the property and the present value of the minimum lease payments. An equivalent amount shall be recognised as a liability in accordance with that same paragraph.

26 Any premium paid for a lease is treated as part of the minimum lease payments for this purpose, and is therefore included in the cost of the asset, but is excluded from the liability. If a property interest held under a lease is classified as investment property, the item accounted for at fair value is that interest and not the underlying property. Guidance on determining the fair value of a property interest is set out in paragraphs 33–52. That guidance is also relevant to the determination of fair value when that value is used as cost for initial recognition purposes.

27 One or more investment properties may be acquired in exchange for a non-monetary asset or assets, or a combination of monetary and non-monetary assets. The following discussion refers to an exchange of one non-monetary asset for another, but it also applies to all exchanges described in the preceding sentence. The cost of such an investment property is measured at fair value unless (a) the exchange transaction lacks commercial
substance or (b) the fair value of neither the asset received nor the asset given up is reliably measurable. The acquired asset is measured in this way even if an entity cannot immediately derecognise the asset given up. If the acquired asset is not measured at fair value, its cost is measured at the carrying amount of the asset given up.

28 An entity determines whether an exchange transaction has commercial substance by considering the extent to which its future cash flows are expected to change as a result of the transaction. An exchange transaction has commercial substance if:

(a) the configuration (risk, timing and amount) of the cash flows of the asset received differs from the configuration of the cash flows of the asset transferred, or

(b) the entity-specific value of the portion of the entity’s operations affected by the transaction changes as a result of the exchange, and

(c) the difference in (a) or (b) is significant relative to the fair value of the assets exchanged.

For the purpose of determining whether an exchange transaction has commercial substance, the entity-specific value of the portion of the entity’s operations affected by the transaction shall reflect post-tax cash flows. The result of these analyses may be clear without an entity having to perform detailed calculations.

29 The fair value of an asset for which comparable market transactions do not exist is reliably measurable if (a) the variability in the range of reasonable fair value estimates is not significant for that asset or (b) the probabilities of the various estimates within the range can be reasonably assessed and used in estimating fair value. If the entity is able to determine reliably the fair value of either the asset received or the asset given up, then the fair value of the asset given up is used to measure cost unless the fair value of the asset received is more clearly evident.
Measurement after recognition

Accounting policy

An entity shall adopt as its accounting policy the cost model prescribed in paragraph 56 to all of its investment property.

This Standard requires all entities to determine the fair value of investment property for the purpose of disclosure even though they are required to follow the cost model. An entity is encouraged, but not required, to determine the fair value of investment property on the basis of a valuation by an independent valuer who holds a recognised and relevant professional qualification and has recent experience in the location and category of the investment property being valued.

Fair value determination

The fair value of investment property is the price at which the property could be exchanged between knowledgeable, willing parties in an arm’s length transaction (see paragraph 5). Fair value specifically excludes an estimated price inflated or deflated by special terms or circumstances such as atypical financing, sale and leaseback arrangements, special considerations or concessions granted by anyone associated with the sale.

An entity determines fair value without any deduction for transaction costs it may incur on sale or other disposal.

The fair value of investment property shall reflect market conditions at the end of the reporting period.

Fair value is time-specific as of a given date. Because market conditions may change, the amount reported as fair value may be incorrect.
or inappropriate if estimated as of another time. The definition of fair value also assumes simultaneous exchange and completion of the contract for sale without any variation in price that might be made in an arm's length transaction between knowledgeable, willing parties if exchange and completion are not simultaneous.

40 The fair value of investment property reflects, among other things, rental income from current leases and reasonable and supportable assumptions that represent what knowledgeable, willing parties would assume about rental income from future leases in the light of current conditions. It also reflects, on a similar basis, any cash outflows (including rental payments and other outflows) that could be expected in respect of the property. Some of those outflows are reflected in the liability whereas others relate to outflows that are not recognised in the financial statements until a later date (eg periodic payments such as contingent rents).

41 [Refer to Appendix 1]

42 The definition of fair value refers to ‘knowledgeable, willing parties’. In this context, ‘knowledgeable’ means that both the willing buyer and the willing seller are reasonably informed about the nature and characteristics of the investment property, its actual and potential uses, and market conditions at the end of the reporting period. A willing buyer is motivated, but not compelled, to buy. This buyer is neither over-eager nor determined to buy at any price. The assumed buyer would not pay a higher price than a market comprising knowledgeable, willing buyers and sellers would require.

43 A willing seller is neither an over-eager nor a forced seller, prepared to sell at any price, nor one prepared to hold out for a price not considered reasonable in current market conditions. The willing seller is motivated to sell the investment property at market terms for the best price obtainable. The factual circumstances of the actual investment property owner are not a part of this consideration because the willing seller is a hypothetical owner (eg a willing seller would not take into account the particular tax circumstances of the actual investment property owner).

44 The definition of fair value refers to an arm’s length transaction. An arm’s length transaction is one between parties that do not have a particular or special relationship that makes prices of transactions uncharacteristic of
market conditions. The transaction is presumed to be between unrelated parties, each acting independently.

45 The best evidence of fair value is given by current prices in an active market for similar property in the same location and condition and subject to similar lease and other contracts. An entity takes care to identify any differences in the nature, location or condition of the property, or in the contractual terms of the leases and other contracts relating to the property.

46 In the absence of current prices in an active market of the kind described in paragraph 45, an entity considers information from a variety of sources, including:

(a) current prices in an active market for properties of different nature, condition or location (or subject to different lease or other contracts), adjusted to reflect those differences;

(b) recent prices of similar properties on less active markets, with adjustments to reflect any changes in economic conditions since the date of the transactions that occurred at those prices; and

(c) discounted cash flow projections based on reliable estimates of future cash flows, supported by the terms of any existing lease and other contracts and (when possible) by external evidence such as current market rents for similar properties in the same location and condition, and using discount rates that reflect current market assessments of the uncertainty in the amount and timing of the cash flows.

47 In some cases, the various sources listed in the previous paragraph may suggest different conclusions about the fair value of an investment property. An entity considers the reasons for those differences, in order to arrive at the most reliable estimate of fair value within a range of reasonable fair value estimates.

48 In exceptional cases, there is clear evidence when an entity first acquires an investment property (or when an existing property first becomes investment property after a change in use) that the variability in the range of reasonable fair value estimates will be so great, and the probabilities of the
Investment Property

various outcomes so difficult to assess, that the usefulness of a single estimate of fair value is negated. This may indicate that the fair value of the property will not be reliably determinable on a continuing basis (see paragraph 53).

49 Fair value differs from value in use, as defined in Ind AS 36 Impairment of Assets. Fair value reflects the knowledge and estimates of knowledgeable, willing buyers and sellers. In contrast, value in use reflects the entity’s estimates, including the effects of factors that may be specific to the entity and not applicable to entities in general. For example, fair value does not reflect any of the following factors to the extent that they would not be generally available to knowledgeable, willing buyers and sellers:

(a) additional value derived from the creation of a portfolio of properties in different locations;

(b) synergies between investment property and other assets;

(c) legal rights or legal restrictions that are specific only to the current owner; and

(d) tax benefits or tax burdens that are specific to the current owner.

50 [Refer to Appendix 1]

51 The fair value of investment property does not reflect future capital expenditure that will improve or enhance the property and does not reflect the related future benefits from this future expenditure.

52 [Refer to Appendix 1]

Inability to determine fair value reliably

53 There is a rebuttable presumption that an entity can reliably determine the fair value of an investment property on a continuing basis. However, in exceptional cases, there is clear evidence when an entity first acquires an investment property (or when an existing property first becomes investment property after a change in use) that the fair
value of the investment property is not reliably determinable on a
continuing basis. This arises when, and only when, comparable market
transactions are infrequent and alternative reliable estimates of fair
value (for example, based on discounted cash flow projections) are not
available. If an entity determines that the fair value of an investment
property under construction is not reliably determinable but expects
the fair value of the property to be reliably determinable when
construction is complete, it shall determine the fair value of that
investment property either when its fair value becomes reliably
determinable or construction is completed (whichever is earlier). If an
entity determines that the fair value of an investment property (other
than an investment property under construction) is not reliably
determinable on a continuing basis, the entity shall make the disclosures
required by paragraphs 79(e)(i), (ii) and (iii).

53A Once an entity becomes able to measure reliably the fair value of an
investment property under construction for which the fair value was not
previously determined, it shall determine the fair value of that property.
Once construction of that property is complete, it is presumed that fair value
can be measured reliably. If this is not the case, in accordance with paragraph
53, the entity shall make the disclosures required by paragraphs 79(e)(i), (ii)
and (iii).

53B The presumption that the fair value of investment property under
construction can be measured reliably can be rebutted only on initial
recognition. An entity that has determined the fair value of an item of
investment property under construction may not conclude that the fair value
of the completed investment property cannot be determined reliably.

54 In the exceptional cases when an entity is compelled, for the reason
given in paragraph 53, to make the disclosures required by paragraphs
79(e)(i), (ii) and (iii), it shall determine the fair value of all its other investment
property, including investment property under construction. In these cases,
although an entity may make the disclosures required by paragraphs 79(e)(i),
(ii) and (iii) for one investment property, the entity shall continue to determine
the fair value of each of the remaining properties for disclosure required by
paragraph 79(e).
If an entity has previously determined the fair value of an investment property, it shall continue to determine the fair value of that property until disposal (or until the property becomes owner-occupied property or the entity begins to develop the property for subsequent sale in the ordinary course of business) even if comparable market transactions become less frequent or market prices become less readily available.

Cost model

After initial recognition, an entity shall measure all of its investment properties in accordance with Ind AS 16’s requirements for cost model, other than those that meet the criteria to be classified as held for sale (or are included in a disposal group that is classified as held for sale) in accordance with Ind AS 105 *Non-current Assets Held for Sale and Discontinued Operations*. Investment properties that meet the criteria to be classified as held for sale (or are included in a disposal group that is classified as held for sale) shall be measured in accordance with Ind AS 105.

Transfers

Transfers to, or from, investment property shall be made when, and only when, there is a change in use, evidenced by:

(a) commencement of owner-occupation, for a transfer from investment property to owner-occupied property;

(b) commencement of development with a view to sale, for a transfer from investment property to inventories;

(c) end of owner-occupation, for a transfer from owner-occupied property to investment property; or

(d) commencement of an operating lease to another party, for a transfer from inventories to investment property.

(e) [Refer to Appendix 1]
Paragraph 57(b) requires an entity to transfer a property from investment property to inventories when, and only when, there is a change in use, evidenced by commencement of development with a view to sale. When an entity decides to dispose of an investment property without development, it continues to treat the property as an investment property until it is derecognised (eliminated from the balance sheet) and does not treat it as inventory. Similarly, if an entity begins to redevelop an existing investment property for continued future use as investment property, the property remains an investment property and is not reclassified as owner-occupied property during the redevelopment.

Transfers between investment property, owner-occupied property and inventories do not change the carrying amount of the property transferred and they do not change the cost of that property for measurement or disclosure purposes.

Transfers between investment property, owner-occupied property and inventories do not change the carrying amount of the property transferred and they do not change the cost of that property for measurement or disclosure purposes.

Disposals

An investment property shall be derecognised (eliminated from the balance sheet) on disposal or when the investment property is permanently withdrawn from use and no future economic benefits are expected from its disposal.

The disposal of an investment property may be achieved by sale or by entering into a finance lease. In determining the date of disposal for investment property, an entity applies the criteria in Ind AS 18 for recognising revenue from the sale of goods and considers the related guidance in the Appendix E to Ind AS 18. Ind AS 17 applies to a disposal effected by entering into a finance lease and to a sale and leaseback.

If, in accordance with the recognition principle in paragraph 16, an entity recognises in the carrying amount of an asset the cost of a replacement for part of an investment property, it derecognises the carrying amount of the replaced part. A replaced part may not be a part that was depreciated separately. If it is not practicable for an entity to determine the carrying amount of the replaced part, it may use the cost of the replacement as an
Investment Property

indication of what the cost of the replaced part was at the time it was acquired or constructed.

69 Gains or losses arising from the retirement or disposal of investment property shall be determined as the difference between the net disposal proceeds and the carrying amount of the asset and shall be recognised in profit or loss (unless Ind AS 17 requires otherwise on a sale and leaseback) in the period of the retirement or disposal.

70 The consideration receivable on disposal of an investment property is recognised initially at fair value. In particular, if payment for an investment property is deferred, the consideration received is recognised initially at the cash price equivalent. The difference between the nominal amount of the consideration and the cash price equivalent is recognised as interest revenue in accordance with Ind AS 18 using the effective interest method.

71 An entity applies Ind AS 37 or other Standards, as appropriate, to any liabilities that it retains after disposal of an investment property.

72 Compensation from third parties for investment property that was impaired, lost or given up shall be recognised in profit or loss when the compensation becomes receivable.

73 Impairments or losses of investment property, related claims for or payments of compensation from third parties and any subsequent purchase or construction of replacement assets are separate economic events and are accounted for separately as follows:

(a) impairments of investment property are recognised in accordance with Ind AS 36;

(b) retirements or disposals of investment property are recognised in accordance with paragraphs 66–71 of this Standard;

(c) compensation from third parties for investment property that was impaired, lost or given up is recognised in profit or loss when it becomes receivable; and
(d) the cost of assets restored, purchased or constructed as replacements is determined in accordance with paragraphs 20–29 of this Standard.

Disclosure

74 The disclosures below apply in addition to those in Ind AS 17. In accordance with Ind AS 17, the owner of an investment property provides lessors’ disclosures about leases into which it has entered. An entity that holds an investment property under a finance lease provides lessees’ disclosures for finance leases and lessors’ disclosures for any operating leases into which it has entered.

75 An entity shall disclose:

(a) its accounting policy for measurement of investment property.

(b) [Refer to Appendix 1]

(c) when classification is difficult (see paragraph 14), the criteria it uses to distinguish investment property from owner-occupied property and from property held for sale in the ordinary course of business.

(d) the methods and significant assumptions applied in determining the fair value of investment property, including a statement whether the determination of fair value was supported by market evidence or was more heavily based on other factors (which the entity shall disclose) because of the nature of the property and lack of comparable market data.

(e) the extent to which the fair value of investment property (as measured or disclosed in the financial statements) is based on a valuation by an independent valuer who holds a recognised and relevant professional qualification and has recent experience in the location and category of the
Investment Property

investment property being valued. If there has been no such valuation, that fact shall be disclosed.

(f) the amounts recognised in profit or loss for:

(i) rental income from investment property;

(ii) direct operating expenses (including repairs and maintenance) arising from investment property that generated rental income during the period; and

(iii) direct operating expenses (including repairs and maintenance) arising from investment property that did not generate rental income during the period.

(iv) [Refer to Appendix 1]

(g) the existence and amounts of restrictions on the realisability of investment property or the remittance of income and proceeds of disposal.

(h) contractual obligations to purchase, construct or develop investment property or for repairs, maintenance or enhancements.

76-78 [Refer to Appendix 1]

79 In addition to the disclosures required by paragraph 75, an entity shall disclose:

(a) the depreciation methods used;

(b) the useful lives or the depreciation rates used;

(c) the gross carrying amount and the accumulated depreciation (aggregated with accumulated impairment losses) at the beginning and end of the period;
Indian Accounting Standards

(d) a reconciliation of the carrying amount of investment property at the beginning and end of the period, showing the following:

(i) additions, disclosing separately those additions resulting from acquisitions and those resulting from subsequent expenditure recognised as an asset;

(ii) additions resulting from acquisitions through business combinations;

(iii) assets classified as held for sale or included in a disposal group classified as held for sale in accordance with Ind AS 105 and other disposals;

(iv) depreciation;

(v) the amount of impairment losses recognised, and the amount of impairment losses reversed, during the period in accordance with Ind AS 36;

(vi) the net exchange differences arising on the translation of the financial statements into a different presentation currency, and on translation of a foreign operation into the presentation currency of the reporting entity;

(vii) transfers to and from inventories and owner-occupied property; and

(viii) other changes; and

(e) the fair value of investment property. In the exceptional cases described in paragraph 53, when an entity cannot determine the fair value of the investment property reliably, it shall disclose:

(i) a description of the investment property;
Investment Property

(ii) an explanation of why fair value cannot be determined reliably; and

(iii) if possible, the range of estimates within which fair value is highly likely to lie.
Appendix A

References to matters contained in other Indian Accounting Standards

This Appendix is an integral part of Indian Accounting Standard (Ind AS) 40 Investment Property.

Appendix 1

Note: This Appendix is not a part of the Indian Accounting Standard. The purpose of this Appendix is only to bring out the differences, if any, between Indian Accounting Standard (Ind AS) 40 and the corresponding International Accounting Standard (IAS) 40, Investment Property.

Comparison with IAS 40, Investment Property

1. IAS 40 permits both cost model and fair value model (except in some situations) for measurement of investment properties after initial recognition. Ind AS 40 permits only the cost model. The following paragraphs of IAS 40 which deal with fair value model have been deleted in Ind AS 40. In order to maintain consistency with paragraph numbers of IAS 40, the paragraph numbers are retained in Ind AS 40:

   (i) Paragraph 6
   (ii) Paragraph 31
   (iii) Paragraphs 32A-32C
   (iv) Paragraphs 33-35
   (v) Paragraph 41
   (vi) Paragraph 50
   (vii) Paragraph 52
   (viii) Paragraphs 60-65
   (ix) Paragraph 75(b)
   (x) Paragraph 75(f)(iv)
   (xi) Paragraphs 76-78

2. The transitional provisions given in IAS 40 have not been included in Ind AS 40 since all transitional provisions related to Ind ASs, wherever considered appropriate have been included in Ind AS 101, First-time Adoption of Indian Accounting Standards corresponding to IFRS 1, First-time Adoption of International Financial Reporting Standards.
Indian Accounting Standards

3. IAS 40 requires disclosure of fair values of investment property when cost model is used. Since this requirement is retained in Ind AS 40, paragraphs 53, 53A, 53B, 54 and 55 and certain other paragraphs of IAS 40 have been modified. The modifications include substitution of fair value measurement with fair value determination/disclosure and deletion of reference to use of cost model when fair value determination is unreliable.

4. IAS 40 permits treatment of property interest held in an operating lease as investment property, if the definition of investment property is otherwise met and fair value model is applied. In such cases, the operating lease would be accounted as if it were a finance lease. Since Ind AS 40 prohibits the use of fair value model, this treatment is prohibited in Ind AS 40. As a result, paragraph 6 of IAS 40 has been deleted in Ind AS 40 (see point 1(i) above). In addition, the expression ‘investment property under a finance or operating lease’ appearing in paragraph 74 of IAS 40 has been modified as ‘investment property under a finance lease’ in Ind AS 40.

5. As a result of prohibition of use of fair value model in Ind AS 40, there are some modifications in the wording of paragraph 26 (removal of the words ‘for the fair value model’), paragraphs 30 and 32 (Accounting policy), heading above paragraph 33 (‘Fair value determination’ instead of ‘Fair value model’), paragraph 56, paragraph 59 (deletion of portion relating to fair value model), paragraph 68 (deletion of a portion dealing with fair value model), heading above paragraph 74 (deletion of the heading ‘Fair value model and cost model’) and 75(a) (disclosure of accounting policy) as compared to the wording used in IAS 40.

6. Different terminology is used in this Standard e.g., the term ‘balance sheet’ is used instead of ‘Statement of financial position’.

7. The following paragraphs appear as ‘Deleted’ in IAS 40. In order to maintain consistency with paragraph numbers of IAS 40, the paragraph numbers are retained in Ind AS 40:

(i) Paragraph 9(d)
(ii) Paragraph 22
(iii) Paragraph 57(e)
